

***Thermoguard Setup
Command line switches
"Silent Setup" V2.9x***

Thermoguard Setup TGuard_29x.exe supports several command line switches. These enable setting certain presets, selecting only single components and running the installation "silent", i.e. without any or reduced user interactivity. You may use only one parameter or any combination which suits your needs:

Note: The switches are not case sensitive, they may be entered in lower or mixed case as well.

/LANG=*language*

Determines the setup language, *language* is either **en** or **de**.
If this switch is present, the language selection dialog will be skipped.
The setup language determines if English or German manuals are installed.

/DIR="*Folder name*"

The default target directory (%ProgramFiles%\Thermoguard) can be overwritten by this switch; example: **/DIR="G:\Monitoring\Thermoguard"**

/COMPONENTS="*List*"

Selection of components; possible values for "*List*":

main	Main program (including manuals etc.)
tgrep	<i>Thermoguard Report</i>
uti\relif	TGRellF (<i>Thermoguard</i> Relay Interface utility)
uti\dec	TGDecrypt (Utility for decryption of <i>Thermoguard's</i> tg and log files)

You may enter more than one item comma separated.

On a first time installation all components are selected by default. If updating a previous installation those components selected previously are selected.

/GROUP="*Folder name*"

The default start menu folder "Thermoguard" can be altered using this switch. Example: **/GROUP="Monitoring Software\Thermoguard"**

/TASKS="*List*"

Determines "Additional tasks"; possible values for "*List*":

desktopiconMain	Create a desktop shortcut for the main program
desktopiconRep	Create a desktop shortcut for <i>Thermoguard Report</i>
SetFirewall	Set an inbound firewall rule for the main program

A prefixed "!"-character negotiates the task (do *not* execute).

/SILENT

or

/VERYSILENT

Only "important" dialogs (e.g. warning for locked *Thermoguard* files) and installation progress is displayed (the latter not with VERYSILENT).

Note: A (very)silent Update Setup always keeps existing configuration files TGuard.lic, TGuard.scx and TGuard.ini (an interactive Setup asks the user if he wants to keep the files).

Command line examples

Note: All switches must be entered on a single line.

Example 1

First time installation of the main program only using German and a custom start menu entry. Do not set a firewall rule

```
TGuard_29x.exe /lang=de /components="main" /group="Monitoring  
Software\Thermoguard" /tasks="desktopiconMain,!SetFirewall" /silent
```

Example 2

Installation of *Thermoguard Report* only on a workstation with English documentation, no desktop shortcut

```
TGuard_29x.exe /lang=en /components="tgrep" /tasks="!desktopiconRep"  
/silent
```

Example 3

Installation of *TGRellF* Utility only on a "*Thermoguard-less*" computer

```
TGuard_29x.exe /lang=en /components="uti\relif" /silent
```
